Future **Data/AI Scientist** (Engineer in Data and AI) with strong theoretical and project experience, seeking a **6-month end-of-study internship** to apply advanced analytical methods in a professional setting.

Professional Experiences

AI Scientist Intern — February – August 2026
ALTEN — *Sèvres, France*

- Developed an end-to-end framework for predictive system-failure modeling in complex Web3 financial networks JEPA
- Engineered an Ego-temporal network pipeline using PyTorch Geometric to capture multi-scale local node dynamics and neighborhood evolution (GCP BigQuery)
- Implemented a JEPA to predict future latent representations of network states (Python, PyTorch)
- Managed the end-to-end reserach pipeline, including formalizing the theoretical hypothesis, designing custom data ingestion for temporal graphs, and validating model robustness against historical system shocks.

Data Engineer Intern — May – August 2025
Société Générale — *Val de Fontenay, France*

* Designed and assessed existing software testing strategies in a complex environment
* Proposed and implemented new testing strategies tailored to project requirements (Scala, Java, Spark, Apache Kafka)
* Developed a testing application for data ingestion into a cloud data lake, including the setup of APIs, an S3 bucket, and data processing pipelines (Python, REST API, AWS S3)

Software Developer Intern — January – February 2024
VINCI Energies — Cloud, Communication and Services — *La Défense, France*

* Developed a chatbot for client ticket management using Llama 2 (Python, Docker, Linux VM)

Junior Engineering Office Technician Intern — December 2022 – February 2023
VINCI Energies — AXIANS — *Palaiseau, France*

* Wrote procedures and processed Work Declarations and Notices of Intent to Commence Work
* Built an Excel database for managing customer contracts (Excel, VBA)

Education

ECE Paris — 2021 – August 2026
Engineering Degree - Specialization in Big Data / Artificial Intelligence — Cloud Option — *5th-year engineering student*

Ajou University, Suwon (South Korea) — August 2023 – January 2024
University Exchange Semester — Computer Science

French Baccalauréat (Maths, Physics-Chemistry, Computer Science) — 2021

Projects

Final Project X Alten

* Develop an AI that optimize finite elements analysis (FEA)

Hackathon Agentic Scenario organised by Reply Challenge

* Scenario : Built an agentic system to detect fraud case

Multidisciplinary Artificial Intelligence Project

* Built a multi-model AI system for summarizing, categorizing, and translating news articles

Hackathon AWS organised by IPPON

* Chaotic scenario : Maintenance and scaling of a platform on the AWS cloud

Database Management in SQL/NoSQL

* Used Oracle SQL, MongoDB, and Neo4j to study purchasing behaviors on an online platform

Skills

Programming Languages : Python, Java, C, Scala, SQL
AI : ML, DL, GenAI, NLP, Recommended systems
Work Methodologies : V-Model, Agile

Visualization : Power BI, matplotlib/seaborn

Cloud/DevOps : Azure, AWS, Docker, Git/GitHub
Big Data : Spark, Kafka, Hadoop, DataBricks, RDBMS, MongoDB, Neo4J
Certification : AWS Academy Graduate - Cloud Foundations - Training Badge
Others skills : Networks, Robotics, Web

Languages

French: Native
Spanish: Intermediate

English: Professional

Interests

Tech & Veille: Suivi des innovations en IA et Blockchain
Sports: Course, Randonnée, Cyclisme, Football, Tennis, Ski, Escalade

Arts: Dessin, Musées et expositions
Jeux vidéo: Suivi des compétitions e-sports
