PROFILE

Highly motivated **AI/ML Engineer** with strong theoretical and project experience in Big Data and Artificial Intelligence. Specialized in predictive modeling, deep learning, and scalable cloud architectures. Seeking to apply advanced analytical methods in high-impact professional environments.

EXPERIENCE

AI Scientist Intern <i>ALTEN</i> - Developed an end-to-end framework for predictive system-failure modeling in complex Web3 financial networks (JEPA) - Engineered an Ego-temporal network pipeline using PyTorch Geometric to capture multi-scale local node dynamics and neighborhood evolution (GCP BigQuery) - Implemented a JEPA to predict future latent representations of network states (Python, PyTorch) - Managed the end-to-end research pipeline, including formalizing the theoretical hypothesis, designing custom data ingestion for temporal graphs, and validating model robustness against historical system shocks.	February 2026 – August 2026 <i>Sèvres, France</i>
Data Engineer Intern <i>Société Générale</i> - Designed and assessed software testing strategies in a complex environment - Implemented new testing strategies tailored to requirements (Scala, Java, Spark, Apache Kafka) - Developed a testing application for cloud data lake ingestion, including APIs, S3 buckets, and data processing pipelines (Python, REST API, AWS S3)	May 2025 – August 2025 <i>Val de Fontenay, France</i>
Software Developer Intern <i>VINCI Energies — Cloud, Communication and Services</i> Developed a chatbot for client ticket management using Llama 2 (Python, Docker, Linux VM)	January 2024 – February 2024 <i>La Défense, France</i>
Junior Engineering Office Technician Intern <i>VINCI Energies — AXIANS</i> - Wrote procedures and processed Work Declarations and Notices of Intent to Commence Work - Built an Excel database for managing customer contracts (Excel, VBA)	December 2022 – February 2023 <i>Palaiseau, France</i>

EDUCATION

ECE Paris <i>Master's Degree in Engineering - Big Data & Artificial Intelligence Cloud Option</i>	September 2021 – August 2026 <i>Paris, France</i>
Ajou University <i>University Exchange Semester — Computer Science</i>	August 2023 – January 2024 <i>Suwon, South Korea</i>
French Baccalauréat <i>Maths, Physics-Chemistry, Computer Science</i>	2021

PROJECTS

Final Project X Alten <i>AI, FEA Optimization, Python</i> Developing an AI system to optimize finite elements analysis (FEA) processes.
Hackathon Agentic Scenario by Reply Challenge <i>AI Agents, Fraud Detection</i> Built an agentic system to detect complex fraud cases in real-time scenarios.
Multidisciplinary AI Project <i>NLP, Python, AI Pipeline</i> Built a multi-model AI system for summarizing, categorizing, and translating news articles.
Hackathon AWS by IPPON <i>Cloud, AWS, Resilience</i> Managed maintenance and scaling of a high-load platform on AWS under chaotic scenarios.

TECHNICAL SKILLS

AI & Machine Learning: ML, DL, GenAI, NLP, Recommendation Systems, PyTorch, PyTorch Geometric, JEPA
Big Data & Cloud: GCP BigQuery, Spark, Kafka, Hadoop, Databricks, AWS, Azure, Docker, S3, MongoDB, Neo4J
Programming Languages: Python, Java, C, Scala, SQL
Tools & Methodologies: Git/GitHub, Agile (Scrum), V-Model, Power BI, Matplotlib, Seaborn
Certifications: AWS Academy Graduate, Google Cloud (BigQuery Insights, AI Studio Prototypes)

LANGUAGES & INTERESTS

Languages: French (Native), English (Professional), Spanish (Intermediate)
Interests: Tech & AI Watch, Web3, Drawing, Running, Football, Hiking, Esport competitions
